SOP – MATERIAL ARRANGEMENT AND STORAGE REQUIREMENTS

Purpose: Ensure materials are of the correct type, easily identifiable, prevent code mix-ups / damage, and maintain a 5S workplace.

Area: _____	SOP No.: SOP-5S-___	Version: 01	Effective date: ___ / ___ / _____

01	**Separate classification**	Each tray must contain only one material code / one type. Do not mix materials with different codes, statuses, or lot numbers.
02	**Correct location and orientation**	Use the correct tray / molded insert for each material type. Place components in the correct slot and orientation; do not stack, tilt, shift, or place them outside the designated slots.
03	**Neat arrangement**	Distribute materials neatly and evenly; do not pile them up. Do not allow materials to spill, mix with adjacent trays, or be placed directly on the worktable.
04	**Clear labels**	Each tray must have an identification label showing the correct material code, name / specification, and quantity. Place the label where it is easy to see and not obstructed; the information must match the contents.
05	**Quantity / status control**	Check the actual quantity against the label / documents when receiving, issuing, and handing over materials. NG, pending-inspection, or unknown-status materials must be kept separate and clearly marked with a warning label.
06	**Material protection**	Do not drop, impact, bend, or touch contact pins / sensitive surfaces. For ESD-sensitive components, use trays and anti-static measures in accordance with the process requirements.
07	**Empty / defective tray management**	Collect empty trays in the designated location. Remove cracked, dirty, deformed, or non-positioning trays from use and report them to the person in charge.
08	**Maintain 5S after operation**	After taking / returning materials, close the lid (if any), realign trays neatly, clean the area, and do not leave unrelated items on the table.

			
Classify by material code	Place in the correct molded slot	Arrange materials neatly	Labels must be easy to identify

PROHIBITED: Mixing material codes • Allowing materials to spill • Using damaged / dirty trays • Incorrect or missing labels • Placing materials outside the designated area.

Responsibility: Employees must follow this SOP. The team leader / supervisor must inspect at the start, during, and end of each shift. Any abnormality must be isolated and reported to the person in charge.
